

Hackathon

Zifo's Scienteka

Problem Statement

In this digital era of specialized health devices, smart wearables, and other sophisticated technologies, we have different forms of data being collected constantly. How will you rightly and specifically utilize these technologies as well as data to better patient health and wellness?

Problem Description

In recent years, there has been a surge in the use of smart wearables and other sophisticated health devices, with some technologies allowing patients to collect and report their own data. With the increased usage of these devices, an enormous amount of data is also being gathered. Proper use of these technologies and data substantially aids patient health and wellness.

Expected Output

Develop strategies for effective usage of data and technology to improve patient care.
